

LOSIMOL 79111

Introduction:

They have outstanding surface-wetting capabilities and most of them are extremely pressure-resistant. Mainly the Adhesive Oils as well as the Retarding and Adhesive Oils will not drip and run out of a bearing, for example, and creep along the shaft. Even in applications involving high-speed moving components the oils stay in place for long periods, reduce friction, and protect the components from wear and corrosion. The oils can be subjected to high loads and shocks – the adhesive oil film will remain intact.

General Technical Data Regarding LOSIMOL 79111:

Pen. Worked	abt. 330/360
App Dyn. Viscosity	abt. 4.000 cP
Ductility	weak
Evap. Loss	below 0.3% - 10h/20'
Spread.B ehav.	Sp = 16170"
Oper. Temp. Range	abt. - 45" C + 125" C
Chem. Resist. Plastics	PA, PS, POM, PPO, A BS, SAN, PC
