

## ArChine Base Polymers

### Product Description

**ArChine base stocks** are polyalkylene glycols (PAGs), which are polymers of ethylene oxide and propylene oxide described with the generalized formula:

**ArChine Synfluid PAG 50-A series** are alcohol-started base stocks containing equal amounts, by weight, of oxyethylene and oxypropylene groups with a single terminal hydroxyl group. They are water soluble at ambient temperature and are available in a variety of molecular weights and viscosities.

**ArChine Synfluid PAG 75-W series** are diol-started base stocks containing 75 weight percent oxyethylene and 25 weight percent oxypropylene groups with two terminal hydroxyl groups. They are water soluble at temperatures below 75°C and are available in a variety of molecular weights and viscosities.

**ArChine Synfluid PAG P series** are alcohol-started base stocks of all oxypropylene groups ( $m=0$ ) with one terminal hydroxyl group. They are water insoluble and available in a variety of molecular weights and viscosities.
