

CP-4100-220

PRODUCT DESCRIPTION

CP-4100-220 product is high quality synthetic fluids based on premium dibasic acid ester base stocks and formulated to provide superior oxidative and thermal stability.

Typical applications include rotary screw compressor lubricant/coolant, heat transfer fluid and other recirculating systems where long life and reduced fluid consumption are objectives. Lower maintenance costs are also a result of reduced varnish, sludge and carbon deposits. Additives have also been included to provide excellent lubricity and protection against rust and copper corrosion.

CP-4100-46 is readily biodegradable. Small amounts of this oil spilled or leaked onto the ground will not adversely affect the environment.

Disposal of these fluids should be done in accordance with Local, State, and Federal regulations.
