

GRS-900#2

GRS-900#2 is a multi-purpose grease containing an aluminum complex thickener and high viscosity black oil. It is designed for outstanding service life and equipment protection over a wide range of temperatures and environmental conditions. Unlike many other greases, it possesses the unique property of maintaining its consistency. The adhesiveness of this grease is a guarantee that it will stay in place.

GRS-900#2 is recommended for heavy-duty gear and bearing applications operating at low speed and high temperatures. This grease excels in use in bearings subjected to high pressures or heavy shock loading, where application is frequent and regular.

Typical Properties *

Soap Type	Aluminum
Base Oil Viscosity, cSt 40°C	280
100°C	21.2
Worked Penetration at 25°C	275
Timken OK Load, Kg	25
Four Ball Weld Load, Kg	270
Dropping Point, °C	282

* These values are not intended for use in preparing specifications.
