

## JICHUAN MG-1 OIL TREATMENT

### JICHUAN PREMIUM OILTREATMENT

#### PRODUCT DESCRIPTION:

JICHUAN MG-1 is a viscous liquid additive with MVL added to increase the motor oil viscosity index (V.I.). The thickener is a high molecular weight polymer which is mixed with paraffinic oil used as a carrier MVL is an outstanding anti wear agent of low toxicity, useful in automotive and gear oils, which operate under heavy load conditions.

#### TYPICAL USES:•

- Recommended for use in gasoline and diesel engines operating under severe conditions.
- Designed to be added to the oil in the crankcase of cars, trucks, buses etc.

#### FEATURES:

- JICHUAN MG-1's main function is to reduce wear and oil consumption and to increase engine compression.
- High molecular weight polymer increases oil V.I. and the oil viscosity the rely improving ring sealing action.
- MVL acts as a friction reducer, anti-oxidant, antiwear and E.P. agent.
- Protects against breaking down from shear and pumping action.
- Engine noise is greatly reduced.
- Protects the oil life and minimizes corrosion and oxidation on the engine internal parts.
