## Highly efficient safety cleaners

High industrial safety - slow evaporation without any residues  
 - almost odourless

**RIVOLTA M.T.X./M.T.X. 160** remove oils, greases, all kinds of dust deposits, tar and other contaminations because of their high cleaning power.

**RIVOLTA M.T.X./M.T.X. 160** are used for cleaning of machines, engines, engine parts, tools and appliances, gear boxes, roller bearings, gear-wheels, lifter chains, all kinds of metal parts, sheets, filters, etc.

**RIVOLTA M.T.X./M.T.X. 160** can be used at many cleaning-procedures like immersion, washing, brushing, sprinkling.

**RIVOLTA M.T.X. 160** cleaned items are short-term-protected against corrosion. M.T.X. 160 can be used in steam jet cleaners.

Colour: clear, colourless

Odour: almost odourless

Technical data	Unit of measurement	Norm	M.T.X.	M.T.X. 160
Density (20°C)	g/ml	DIN 51757	0.773	0.772
Flashpoint	°C	DIN EN ISO 2719	+65°C stable	+65°C stable
Evaporation rate	Ether = 1	DIN 53170	200	160

Material attack: RIVOLTA M.T.X. and RIVOLTA M.T.X. 160 are not aggressive to metal. Lacquers resistant to solvents, paints and plastics will not be attacked as long as exposure time is normal.

**RIVOLTA M.T.X./M.T.X. 160** are very economic because of their low densities. Most of the contaminations are heavier and therefore will deposit in a static bath. By this they can be removed and the bath will be cleaning-active for a long time.

**RIVOLTA M.T.X./M.T.X. 160** will not create stable emulsions with water. Separate quickly. M.T.X. is insoluble in water.

This text contains facts and statements and is determined with our best knowledge and will be checked continuously. These statements are depending - among other reasons - on experiences gained in the industry. We only pass them on without liability. Before using our products you should test the applicability and you should convince yourself about the satisfactory performance. Our application examples and suggestions should not request to violate patent rights.
