Extremely biodegradable high performance hydraulic oils with the environmental label "Blue Angel"

RIVOLTA S.B.H. 11 and S.B.H. 23 are synthetic environmentally friendly high performance hydraulic oils. The combination of extremely biodegradable synthetic base oils with a brand-new additive technology will give a performance spectrum to our products which is superior to conventional HLP- or HVLP-hydraulic oils. Our additive package increases the good aging, corrosion and wear characteristics of the base oils. Especially the wearing protection is of outstanding importance. Because of lack of wearing protection of conventional oils, increased wear is created at the contact area "sealing element – metal surface". This is followed by leakage and oil loss. RIVOLTA S.B.H. 11 and S.B.H. 23 with their special additive package avoid wear in an effective way and with this leakage of the system.

The property

- **extremely biodegradable**
- **minimal wear and friction**
- **operative temperature range from**
-40°C up to +90°C (S.B.H. 11)
-35°C up to +100°C (S.B.H. 23)
high viscosity index
- **aging- and oxidation-resistance**
- **good compatibility with seals,
good miscibility with mineral oils**
- **no classification necessary according to the German hazardous substances ordinance**

will give the following benefits

- safety in situations where the lubricant can get into the environment. The biodegradability is higher than 95% (S.B.H. 11) respectively 97% (S.B.H. 23) by weight according to CEC-L-33.
- prevents leakage of the system, raised economy by reduced consumption of energy and extended life-time of machines and facilities
- guarantees operativeness of the hydraulic system at low and high temperatures. Fast and safe start is possible within a wide temperature range.
- long-term use of the lubricant, extended service intervals, reduced maintenance, reduced labour costs
- minimal efforts when changing from mineral to synthetic lubricants
- S.B.H. 11 and S.B.H. 23 stand for a maximum of personal protection. The appropriate use of S.B.H. 11 and S.B.H. 23 does not create any risks for the workers' health. S.B.H. 11 and S.B.H. 23 can also be used in the food industry according to German regulations.

**Rivolta S.B.H. 11 and S.B.H. 23
hydraulic oils that set standards**

Rivolta®

Mammal toxicity	mg/kg	OECD Guidelines No. 401	>5000	>5000
Fish toxicity	g/l	DIN 38412/15	>3.5	>3.5
Biodegradability	% by weight	CEC-L-33	>95	>97

Application: hydraulic systems

- for all kinds of hydraulic systems and hydraulic motors. S.B.H. 11 and S.B.H. 23 top the demands of DIN 51524 for hydraulic oils with specifications HLP and HVLP, except DIN 51587 (tost-test).

Compatibility:

- compatible with seals resistant to mineral oils
- mixable with mineral and ester oils. Do not mix with polyethylene glycol

Preparing of lubrication point:

The following steps have to be carried out before new filling with S.B.H. 11 resp. S.B.H. 23:

- Leave off the old product. If the system was filled with a mixable product, a special flushing is not necessary. However, for the purposes of purity of grades we recommend a flushing with the hydraulic oil which shall be used.
- If the system was filled with a product which is not mixable a flushing must be included.
